From the developers
of your engine.

The formula for economic success.

MWM engines

are designed for long-term high performances with a maximum level of efficiency and maximum service lives. This leads to a high return on investment and short amortization periods.

MWM high-performance engine oils

enable longer oil change intervals with reduced lube oil consumption. The high cleanliness also minimizes the wear of the engine components and the formation of deposits on catalytic converters and exhaust heat exchangers.

MWM engine oil analysis

decides on the use of the best oil in consideration of the available combustion gas and the engine's operating mode. The engine oil analysis is an integral component of the formula for your economic success. Optimize the oil service life by combining MWM Premium oils with MWM Oil Analysis.

MWM service contract

ensures tailored calculation and planning safety for the entire contract duration as well as the value retention of your plant. The highest plant quality at low overall operating costs is ensured.
